

Humus

Pedestrian and ride on cutting systems

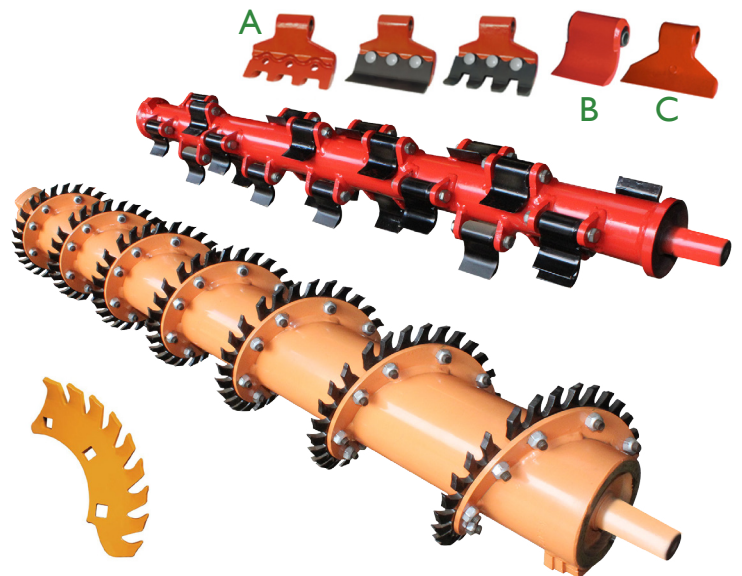

Low-profile flail heads, featuring a choice between the Humus “System Flail” range [shown below in red] and the award winning Humus “Safety-cut” mulching system.

The specially designed deck for use with the Scag SWZ pedestrian, Tiger Cat and Turf Tiger ride-on mowers features the benefits of Humus grasscutting and mulching technology.

The “System” range features a carrier [A] for receiving two types of blade, also the B and C styles of club flail.

The Humus “Safety Cut” system is based on a totally different mulching principle - the special design and arrangement of the multi-toothed cutting blades fixed at the rotor eliminates almost completely the risk of stones and other material being thrown out.

The unique spiral cutting action that rotates at over 4000 rpm ensures continuous reduction to mulch and can clear even the toughest grass and brush up to 1200mm tall in a single pass.

Quality, performance and safety

36” and 42” Super Mulch decks are available for the pedestrian mower, providing easy manoeuvrability even in the smallest of areas and where access is compromised.

The cutting height can be adjusted via a three stage control lever (36” only) and the robust and versatile design with low profile makes it ideal for all areas and undergrowth.

A 48” and 58” deck have been introduced to the range for the Tiger Cat and Turf Tiger respectively.

The deck can also be left on for finer cutting, making it a versatile all year addition to the Scag grass cutting capabilities.
